Markets Update: A Quarter in Review

Second Quarter 2010

- After four consecutive quarters with very strong performance, which continued into April, the US equity market saw a sharp reversal in May and June and ended the second quarter with large negative returns. The broad US market lost over 11% in the quarter, with most asset classes delivering double-digit negative returns.
- Performance in other developed markets around the world was generally worse, especially in Europe. Indeed, the worst-performing developed markets in the quarter were mainly European countries in the midst of severe sovereign-debt crises such as Greece and Spain. Developed markets in the Asia Pacific region generally fared better, especially Singapore, which had a flat return and was by far the best-performing developed market in the second quarter. The US dollar gained ground against most major currencies, especially the euro and the Australian dollar, which hurt the dollar-denominated returns of developed market equities.
- After being the top-performing asset class in 2009, emerging markets continued to cool off in the second quarter, although returns there were generally better than in developed countries. As in the case of developed markets, there was much dispersion in the performance of different emerging markets and asset classes. The fall in commodity prices negatively impacted two of the larger commodity-rich emerging countries, Russia and Brazil, which had sharply negative returns. On the other hand, some smaller emerging markets, such as Chile, Indonesia, and the Philippines managed to post positive returns for the quarter. The US dollar also gained ground against the main emerging market currencies in the second quarter, which hurt the dollar-denominated returns of emerging market equities.
- Value stocks had mixed performance relative to growth stocks in the US during the second quarter. In other developed markets, value stocks greatly underperformed growth stocks across all market capitalization segments. In emerging markets, value stocks outperformed growth stocks across all market capitalization segments.
- Along the market capitalization dimension, small caps outperformed large caps in the US, in other developed markets, and in emerging markets.
- Notwithstanding the continued weakness in the commercial and residential real estate markets, real estate securities had negative returns, but good performance relative to other asset classes.
- Fixed income securities had good returns in the second quarter, as there was a flight to safety in the second quarter as a result of the sovereign debt problems in Europe and weak economic data in the US and abroad. Intermediate government securities and inflation-protected securities did particularly well.

Timeline of Events: A Quarter in Review

Second Quarter 2010

An ash cloud from an Icelandic volcano disrupts aviation service across much of Europe.

An explosion on an oil rig in the Gulf of Mexico marks the beginning of one of the worst environmental disasters in US history.

Arizona signs into law a controversial bill that seeks to curb illegal immigration.

The EU approves a €750b bailout in an effort to secure financial stability across Europe.

Relations on the divided Korean peninsula deteriorate after South Korea blames North Korea for the sinking of one of its naval warships.

Apple overtakes Microsoft to become the largest technology firm by market value, second only to ExxonMobil among US companies.

Apr 15

The Polish president and dozens of Poland's top political and military leaders are killed in a plane crash in Russia.

Apr 30

The SEC accuses Goldman Sachs of fraudulently misrepresenting structured instruments tied to subprime mortgages.

Apr 15

GM announces it has repaid in full the \$8.4b of government loans it received, five years ahead of schedule.

May 15

The so-called "Flash Crash" causes the Dow to plunge some 700 points within 20 minutes before sharply rebounding.

May 31

Thailand's army brings an end to months of government protests in Bangkok.

Jun 15

The average rate on 30-year mortgages falls to 4.69%, the lowest in 39 years.

The lack of a pattern indicates that picking which asset classes will be the best or worst performers is virtually impossible.

In Q4 2008, for example, the MSCI Emerging Markets Index was the second to worst performing asset class. A quarter later it was right up at the top.

Portfolios combining these various investments will avoid extreme returns.

- A look at the determinants of equity performance—relative price and market capitalization—provides insight into the sources of returns.
- Historically, value stocks, as measured by the ratio of book-to-market equity (BtM), have outperformed growth stocks. During the second quarter they had mixed performance when considering the stocks' market capitalization.
- Historically, small stocks have experienced higher returns than large stocks, and that was indeed the case in the second quarter.

Bond Returns

As of June 30, 2010

Index	Returns (%)		
	Q2 2010	One Year	Three Years Annualized
One-Month US Treasury Bills (SBB1)	0.02	0.08	1.30
Bank of America Merrill Lynch Three-Month T-Bills	0.04	0.16	1.57
Bank of America Merrill Lynch One-Year US Treasury Note	0.26	0.99	3.15
Citigroup World Government Bond 1-5 Years (hedged)	0.95	3.04	5.02
US Long Term Government Bonds (SBB1)	12.33	11.94	10.62
Barclays Capital Corporate High Yield	-0.11	26.77	6.54
Barclays Capital Municipal Bonds	2.03	9.61	5.50
Barclays Capital US TIPS Index	3.82	9.52	7.62

Yields on very short-term Treasury bills were little changed in the second quarter relative to the end of the first quarter, while yields on longer-term Treasury securities fell substantially in the second quarter.

As a result, the yield curve flattened over the quarter. The difference in yield between ten-year Treasury bonds and one-month US Treasury bills was 280 basis points at the end of the second quarter, compared to 369 basis points at the end of the first quarter.

Quarterly Topic: Forecasting Interest Rates

Second Quarter 2010

It seemed so obvious. With the economy slowly recovering last year from the worst recession in decades and the federal government spending tens of billions to stimulate job growth, both laymen and experts alike seemed to agree that interest rates had nowhere to go but up. The yield on the ten-year U.S. Treasury note as of June 30, 2009 was 3.52%, down from 5.25% in June 2007 but well above the 2.09% level registered amidst the worst of the credit crisis the previous December. With retail sales and housing activity showing signs of gradual improvement, the only question appeared to be how much higher interest rates would go.

Among fifty economic forecasters surveyed by the WSJ in 2009, forty-three expected the ten-year U.S. Treasury note yield to move higher over the year ahead, with an average estimate of 4.13%. Seven expected a rate of 5.00% or higher while only two predicted rates to fall below 3.00%. The result? The ten-year Treasury yield slumped to 2.95% on June 30, 2010 and rates on 30-year mortgages fell to their lowest level since Fannie Mae began tracking them in 1971.

Some observers may be tempted to poke fun at these hapless “experts”, implying they are incompetent or poorly informed. This interpretation is flawed since it suggests that a team of better experts would achieve a more accurate result. A more useful explanation is that even the most talented analysts are unlikely to make reliable predictions and the poor showing by this particular group is simply what we would expect to see, just as often as not, if markets are working freely and fairly. Today’s bond prices already reflect expectations for tomorrow’s business conditions and inflation and these expectations can change quickly in response to new information. However tempting it may be to believe that we can predict the future better than other market participants through careful study, the results of the WSJ survey as well as numerous other efforts suggest this confidence is misplaced.

What is the message for investors? Predicting interest rates and bond prices is no easier than predicting stock prices, and making decisions based on what appear to be certain outcomes at the time can often prove costly. Many investors reconfigured their portfolios in anticipation of higher interest rates and have penalized their results while they are waiting. Instead of seeking to predict the unpredictable, investors are much more likely to enhance their results by focusing on the elements they *can* control – risk exposure, diversification and minimizing costs and taxes.
